Introduction

Growing from the modular concept established with the award-winning ICV industrial valve platform, ICF factory-assembled valve stations incorporate in one housing foundation up to six valve functions in any combination: mechanical, electromechanical, and electronically operated valves.

Danfoss ships ICF valve stations jobsite ready, function and pressure tested. An ICF is a complete valve station with a single part number.

ICF presents a number of design and ordering advantages, and also reduces time and labor during planning, installation, service, and maintenance.

ICF solutions are designed for low and high pressure refrigerants, liquid lines, compressor injection lines, and hot gas lines.

**Features**

- Designed for industrial refrigeration applications with maximum working pressure of 754 psig (52 bar).
- Approved for all common non-flammable refrigerants including R717 and R744 (CO₂); and for noncorrosive gases and liquids compatible with the seal materials.
- Direct weld connections; socket weld and butt weld versions.
- Low temperature steel housing with stainless steel trim.
- Low weight and compact design.
- Zinc chromate coated for corrosion protection.
- V-port regulating cones on the control modules ensure optimum regulating accuracy even at partial load.
- *Modular Concept*
Valve service is performed by replacing the function module.
- The body has side port connections for pressure gauges, transmitters, sight glasses, drain lines, etc.
- Features for the ICAD motor-actuator used with ICM module will be found in the ICAD section on pages 40 to 46.

Technical data*Refrigerants*

All common non-flammable refrigerants including R717, R744 (CO₂) ; and noncorrosive gases and liquids compatible with the seal materials.
For further refrigerant information please refer to ICF installation instructions.

Flammable hydrocarbons are not recommended. For further hydrocarbon information please contact your Danfoss sales representative.

Temperature range

-76 to +302°F (-60 to +150°C).
ICF with ICM/ICAD: to +248°F (120°C)

Surface protection

The external surface is zinc chromate coated for corrosion protection.

Pressure

Max. working pressure: 754 psig (52 bar g)

Opening differential pressure:

Please refer to the data for each individual function module.

Design

The ICF valve station solution brings together up to six functions on a single compact valve body with socket weld connections up to 1½". Each function component is individually removable for service.

The design allows maximum capacity and minimum pressure drop by using double seats, offering higher capacity than conventional systems that use individual valves and components.

The ICF solution offers compact dimensions and shortened installation time due to the reduced number of direct welded connections and to the absence of pipe flanges.

Supplied as a complete factory assembled and tested valve station.

Function modules

Each ICF housing accommodates a maximum of four or six function modules. The following functions can be fitted:

- Stop valve module
- Manual regulating valve module
- Filter (strainer) module
- Solenoid valve module
- Electronic expansion valve module
- Manual opening module for solenoid
- Check valve module
- Stop/check valve module
- Motor valve module
- External welding connection module
- Blank top cover

Options:

The ICF housing can be supplied with side ports for the following:

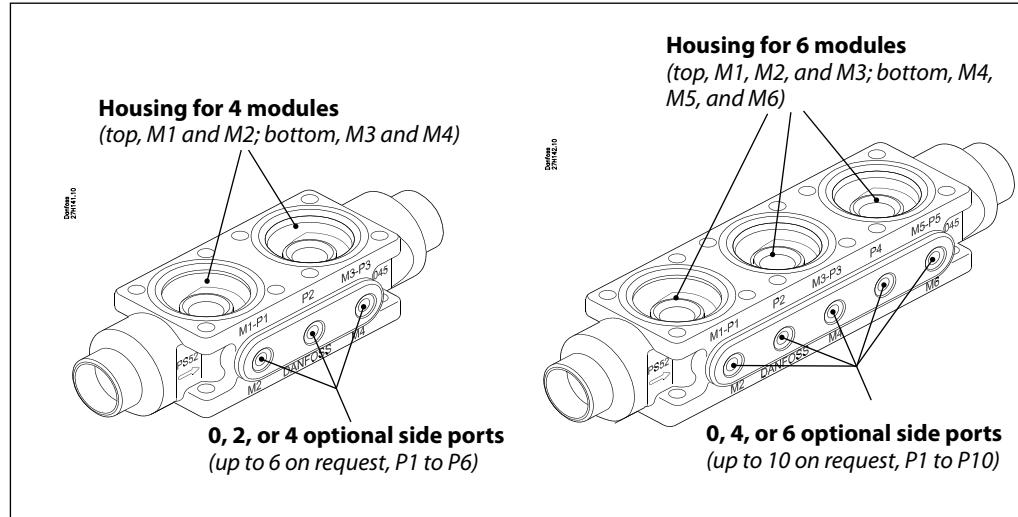

- Sight glass
- Temperature or pressure sensor
- Pressure gauge
- Side connection for drain or bypass.

Welding:

When using TIG or MIG welding technology, it is possible to install the ICF solution without removing the function modules from the body.

When using arc welding, modules need not be removed, but the ICF must be protected against weld splatter.

If using other welding methods the modules must be disassembled.

Housing
The two ICF housings and side port options variants:

Approvals

ICF control solution		
Nominal bore	≤1 in.	1¼ - 1½ in.
Classified for	Fluid group I	
Category	Article 3, paragraph 3	II

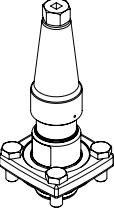

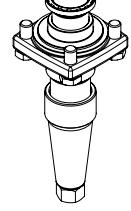

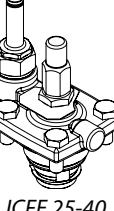

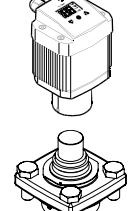

For specific approval information, please contact Danfoss. The ICF concept is designed to fulfill global refrigeration requirements.

ICF 20

Function module configurations

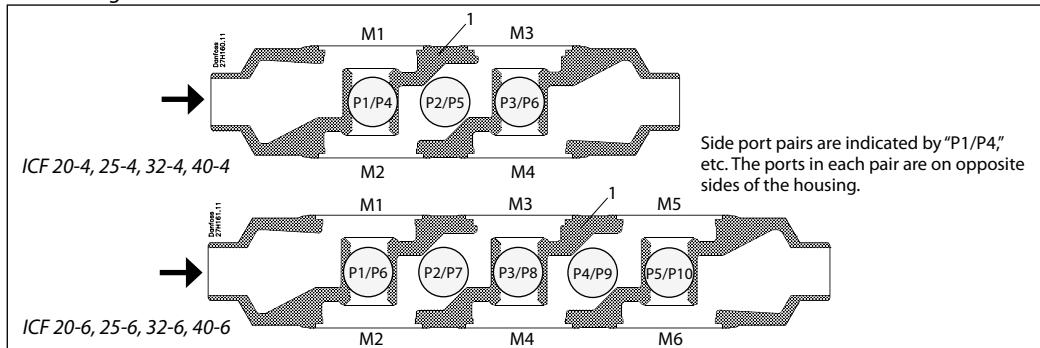

Function Module Type		Can be installed in these locations					
ICFS	Stop valve module	M1	M2	M3	M4	M5	M6
ICFR	Manual regulating (HEV) valve module	M1	M2	M3	M4	M5	M6
ICFF	Filter (strainer) module		M2		M4		M6
ICFE	Solenoid valve module			M3			
ICFC	Check valve module				M4		M6
ICFN	Stop/check valve module				M4		M6
ICM	Motorized valve module	M1		M3		M5	
ICFB	Blank module port cover	M1	M2	M3	M4	M5	M6
ICFA	Electronic expansion valve module for ICF 20 only	M1		M3		M5	
ICFO	Manual opening module for ICFE 20 solenoid				M4		
ICFW	Welding module for ICF 25-40 only	M1	M2	M3	M4	M5	M6

Module locations are indicated by M1, M2, M3, M4, M5, and M6. With respect to refrigerant flow, M1 is closest to inlet.

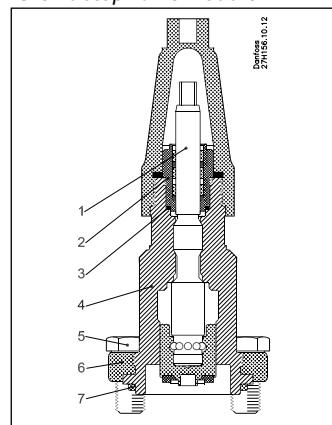

Material specification

ICF housing

	Part	Material	EN	ASTM	JIS
1	Housing	Cast low temperature steel	G20Mn5QT EN 10213-3	LCC, A352	SCPL1, G5151

ICFS 20 stop valve module

	Part	Material	EN	ASTM	JIS
1	Spindle	Stainless steel	X8CrNiS 18-9 EN 10088		G4303 G4304
2	Thread part	Stainless steel	X8CrNiS 18-9 EN 10088		G4303 G4304
3	AL-gasket / refrigeration gasket		AL99 alloy no. 1200 DIN 1712 BL.3		
4	Bonnet	Steel	S235JRG2 EN 10025	A283	G3101
5	Hex-head bolt M10 × 25	Stainless steel	A2-70 EN 24017	A320	A2-70
6	Flange	Cast low temperature steel	G20Mn5QT EN 10213-3	A352	G5152
7	Gasket	Chloroprene (Neoprene) / fiber (Non-asbestos)

Configuration examples - ICF with six function modules
Nomenclature:

The applications described below for each configuration are the most typical, but the configuration will serve also in other applications not described.

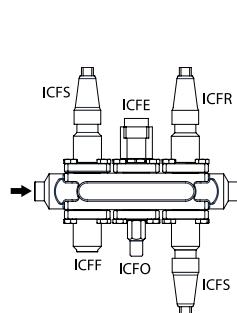

Module locations in relation to refrigerant flow are indicated by M1, M2, M3, M4, M5, and M6.

Application 1: ICF 20-6-1

Pumped liquid lines in flooded systems without hot gas defrost.

The modules are:

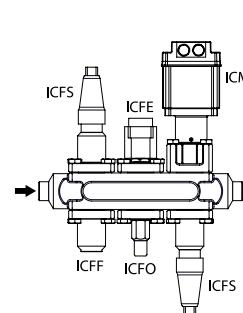

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFO manual opening module (M4) for the solenoid valve
- ICFR manual regulating valve module (M5)
- ICFS stop valve module (M6)

Application 5: ICF 20-6-5A, B, or C cone

Liquid makeup to separators, direct expansion, or liquid injection to compressor. This valve station uses a modulating motorized valve module. A, B, or C represents the cone size of the motorized valve.

The modules are:

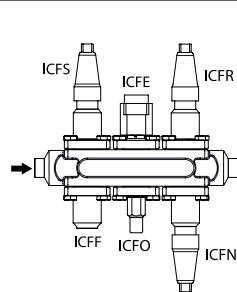

- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICFE solenoid valve module (M3)
 - ICFO manual opening module (M4) for solenoid valve
 - ICM 20-A/20B/20C motor valve module (M5)
 - ICFS stop valve module (M6)
- Motor for ICM must be ordered separately.**

Application 2: ICF 20-6-2

Pumped liquid lines in flooded systems with hot gas defrost.

The modules are:

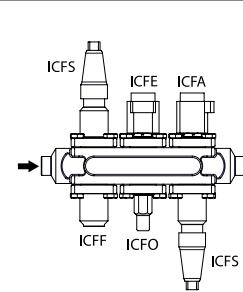

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFO manual opening module (M4) for the solenoid valve
- ICFR manual regulating valve module (M5)
- ICFN stop/check valve module (M6)

Application 6: ICF 20-6-6

Valve station for direct expansion or for liquid injection to the compressor. A pulse width modulation electronic expansion valve is used.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFO manual opening module (M4) for solenoid valve
- ICFA electronic expansion valve module (M5)
- ICFS stop valve module (M6)

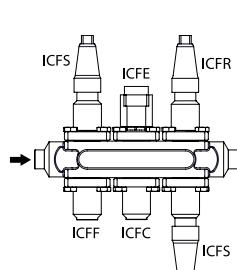

Application 3: ICF 20-6-3

Pumped liquid lines in flooded systems with hot gas defrost, and no manual opening required for solenoid valve.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFC check valve module (M4)
- ICFR manual regulating valve module (M5)
- ICFS stop valve module (M6)

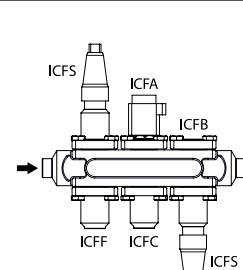

Recommendation: For this application side port P5 (or P10) can be used to bypass the defrost condensate back to the defrost relief valve and suction line.

Application 7: ICF 20-6-7

This application can be used for direct expansion where a check valve is required.

The modules are:

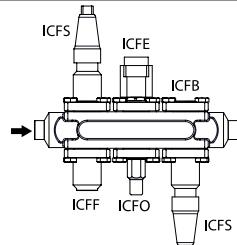

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFA electronic expansion valve module (M3)
- ICFC check valve module (M4)
- ICFB blank top cover (M5)
- ICFS stop valve module (M6)

Application 4: ICF 20-6-4

A hot gas or liquid line solenoid valve station. When used in a hot gas line, the side ports can be used to power a gas-powered valve.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFO manual opening module (M4) for the solenoid valve
- ICFB blank top cover (M5)
- ICFS stop valve module (M6)

Configuration examples - ICF with four function modules

 Nomenclature: **ICF 20-4-9**

The applications described below for each configuration are the most typical, but the configuration will serve also in other applications not described.

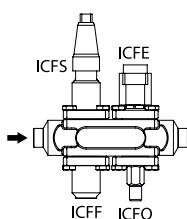

Module locations in relation to refrigerant flow are indicated by M1, M2, M3, and M4.

Application 8: ICF 20-4-8

A hot gas or liquid line solenoid valve station where no stop valve is needed on the outlet side.

The modules are:

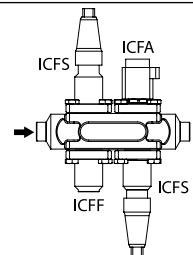

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFO manual opening module (M4)

Application 12: ICF 20-4-12

Valve station using electronic pulse width modulating expansion valve module for direct expansion or for liquid injection to compressor.

The modules are:

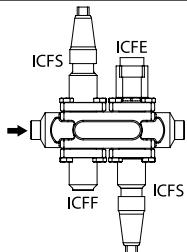

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFA electronic expansion valve module (M3)
- ICFS stop valve module (M4)

Application 9: ICF 20-4-9

A hot gas or liquid line solenoid valve station where no manual stem is needed for the solenoid valve.

The modules are:

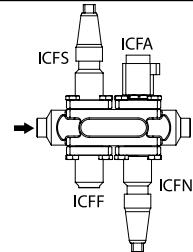

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFS stop valve module (M4)

Application 13: ICF 20-4-13

Valve station using electronic pulse width modulation valve module for direct expansion where a check valve is required.

The modules are:

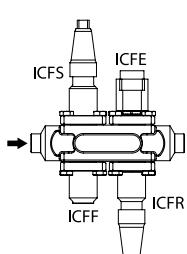

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFA electronic expansion valve module (M3)
- ICFN stop/check valve module (M4)

Application 10: ICF 20-4-10

Pumped liquid lines of flooded systems without hot gas defrost, where no manual stem is needed for the solenoid valve.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFR manual regulating valve module (M4)

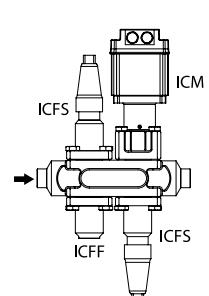

Application 14: ICF 20-4-14A, B or C.

Valve station using modulating motorized valve module for liquid make-up to separator, direct expansion, or liquid injection to compressor. A, B, or C represents the cone size of the motorized valve. A battery backup or UPS must be connected to the motorized valve for it to close during power failure.

The modules are:

- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICM 20-A/20B/20C motor valve module (M3)
 - ICFS stop valve module (M4)
- Motor for ICM must be ordered separately.**

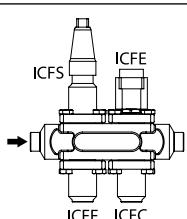

(This configuration is the same as for application 5, but without solenoid valve)

Application 11: ICF 20-4-11

Liquid line solenoid valve to feed multiple evaporators with individual hand regulating or expansion valves and hot gas defrost.

The modules are:

- ICFS stop valve module
- ICFF filter module
- ICFE solenoid valve module
- ICFC check valve module

Configuration examples - ICF with six function modules

Nomenclature: **ICF 25 - 6 - 3**

Type Housing size Application reference number (as illustrated below)

Number of module ports

ICF (25-40)-6

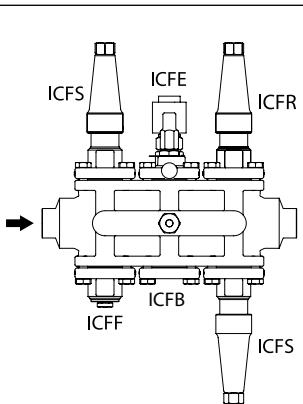

The applications described below for each configuration are the most typical, but the configuration will serve also in other applications not described.

Module locations in relation to refrigerant flow are indicated by M1, M2, M3, M4, M5, and M6.

Application 1: ICF (25-40)-6-1A or B

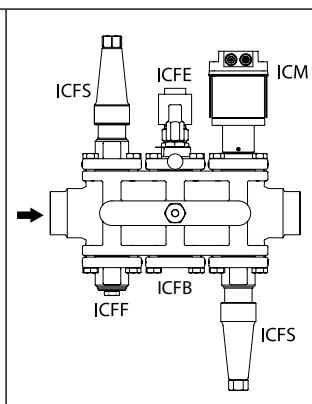

Pumped liquid lines in flooded systems without hot gas defrost.

- The modules are:
- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICFE solenoid valve module (M3)
 - ICFB blank port cover (M4)
 - ICFR A or B manual regulating (HEV) valve module (M5)
 - ICFS stop valve module (M6)

Application 5: ICF (25-40)-6-5A or B

Motorized valve station with solenoid. 'A' cones can be used for liquid makeup, direct expansion, or liquid injection to compressor. The 'B' cone can only be used for pressure regulation.

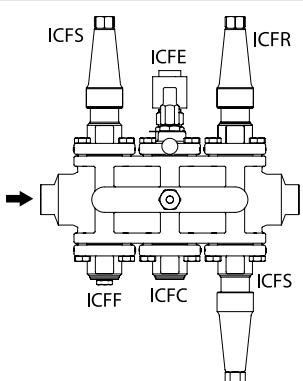

- The modules are:
- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICFE solenoid valve module (M3)
 - ICFB blank port cover (M4)
 - ICM 25-A or B motor valve module (M5)
 - ICFS stop valve module (M6)
- Motor-actuator for ICM must be ordered separately.**

Application 3: ICF (25-40)-6-3A or B

Pumped liquid lines in flooded systems with hot gas defrost.

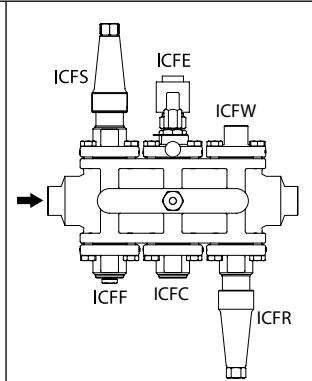

- The modules are:
- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICFE solenoid valve module (M3)
 - ICFC check valve module (M4)
 - ICFR A or B manual regulating (HEV) valve module (M5)
 - ICFS stop valve module (M6)

Recommendation: for this application side port P5 (or P10) can be used for small capacities to bypass the defrost condensate back to the defrost relief valve and suction line.

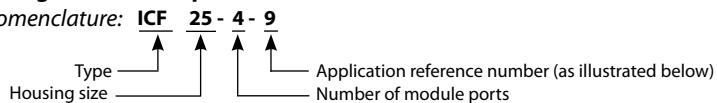

Application 15: ICF 20-6-15A or B

Pumped liquid lines in flooded systems with hot gas defrost. An ICFW welding module is used to drain defrost condensate to a defrost relief regulator, and the hand regulating (HEV) valve will also be used as a stop valve.

- The modules are:
- ICFS stop valve module (M1)
 - ICFF filter module (M2)
 - ICFE solenoid valve module (M3)
 - ICFC check valve module (M4)
 - ICFW external connection welding module (M5)
 - ICFR A or B manual regulating valve module (M6)

Configuration examples - ICF with four function modules

 Nomenclature: **ICF 25 - 4 - 9**

ICF (25-40)-4

The applications described below for each configuration are the most typical, but the configuration will serve also in other applications not described.

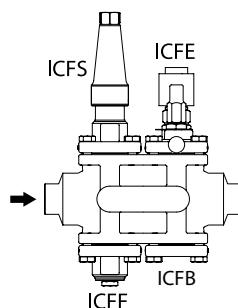

Module locations in relation to refrigerant flow are indicated by M1, M2, M3, and M4.

Application 8: ICF (25-40)-4-8

A hot gas or liquid line solenoid valve station where no stop valve is needed on the outlet side)

The modules are:

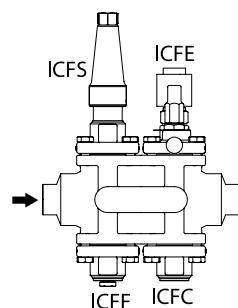

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFB blank port cover (M4)

Application 11: ICF (25-40)-4-11

Liquid line solenoid valve to feed multiple evaporators with individual hand regulating or expansion valves and hot gas defrost.

The modules are:

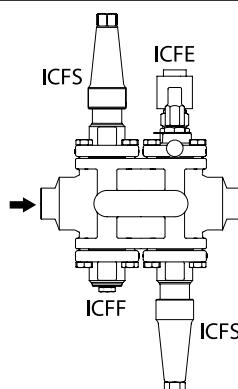

- ICFF stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFC check valve module (M4)

Application 9: ICF (25-40)-4-9

A hot gas or liquid line solenoid valve station .

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFS stop valve module (M4)

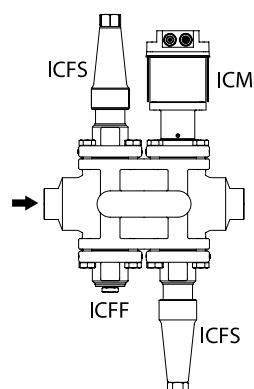

Application 14: ICF (25-40)-4-14A or B.

Motorized valve station without solenoid. 'A' cones can be used for liquid makeup, direct expansion, or liquid injection to compressor. The 'B' cone can only be used for pressure regulation or on/off solenoid function. A battery backup or UPS must be connected to the motorized valve for it to close during power failure.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICM 25 A or B motor valve module (M3)
- ICFS stop valve module (M4)

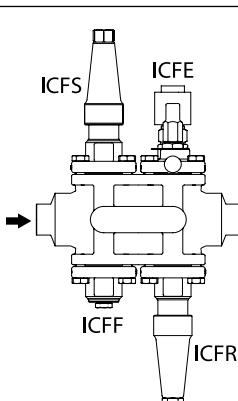

(same as application 5, but without solenoid valve)

Application 10: ICF (25-40)-4-10A or B

A solenoid valve stateion for pumped liquid lines of flooded systems without hot gas.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFR A or B manual regulating valve module (M4)

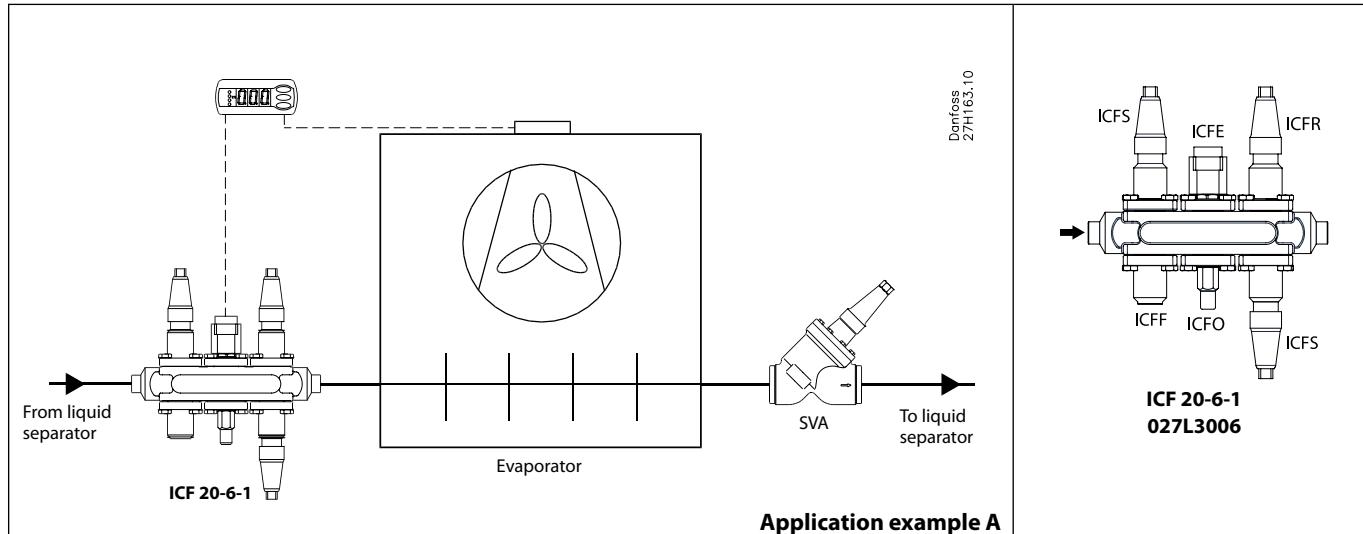

Application Example A

A valve station is required for a flooded evaporator operated on and off by a thermostat, and with electric defrost. Manual opening of the solenoid valve is required. Pipe dimension is 1", and the preferred connection is socket weld. There is no requirement for a sight glass nor for

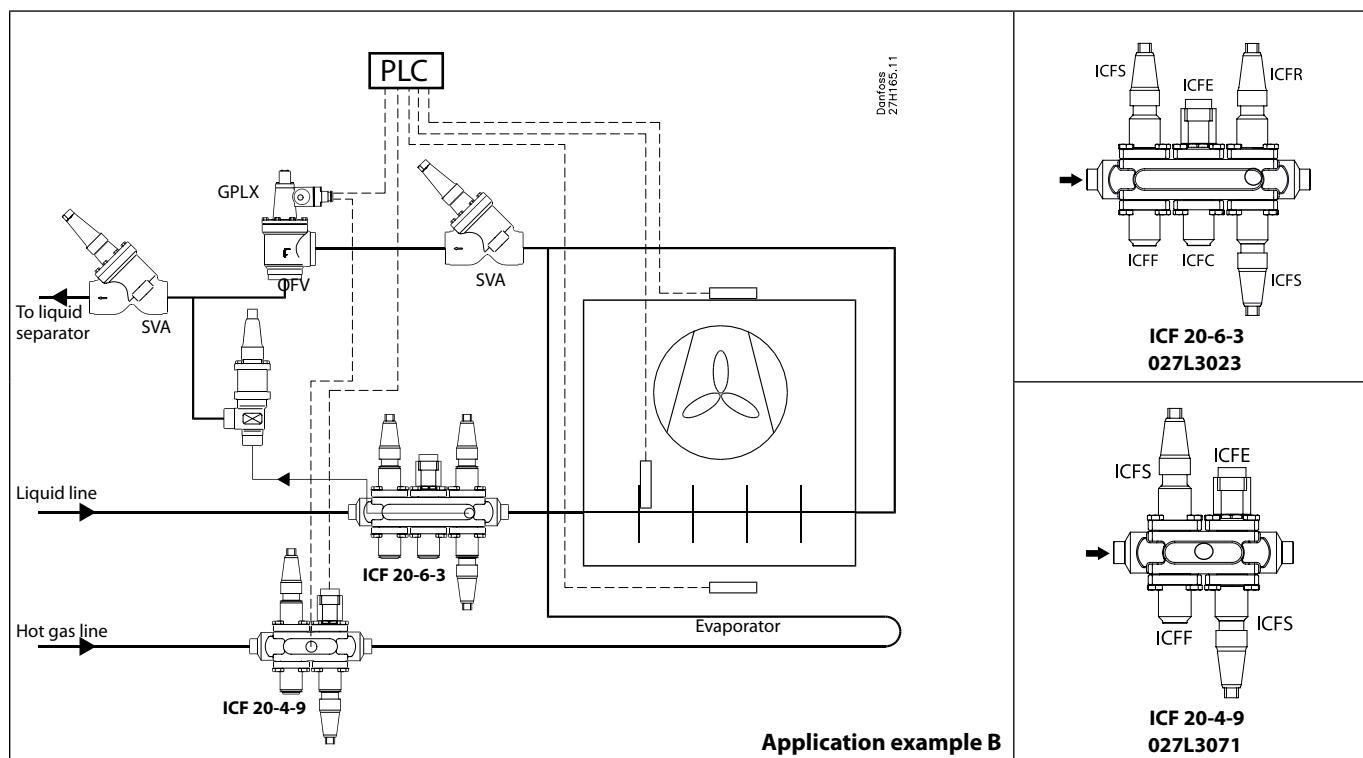

side pressure gauge or drain connections.

Depending on capacity, choose either ICF 20-6-1 (code number 027L3006) or ICF 25-6-1A (code number 027L4001). For this example, ICF 20-6-1 was used.

**Application example A****Application Example B**

Valve stations are required for a flooded evaporator with hot gas defrost. The pumped liquid line size is 3/4" and the preferred connection is socket weld. No manual opening stem is needed, and a side port is needed to drain defrost condensate to the defrost relief valve. For this application, ICF 20-6-3 (code number 027L3023) was chosen.

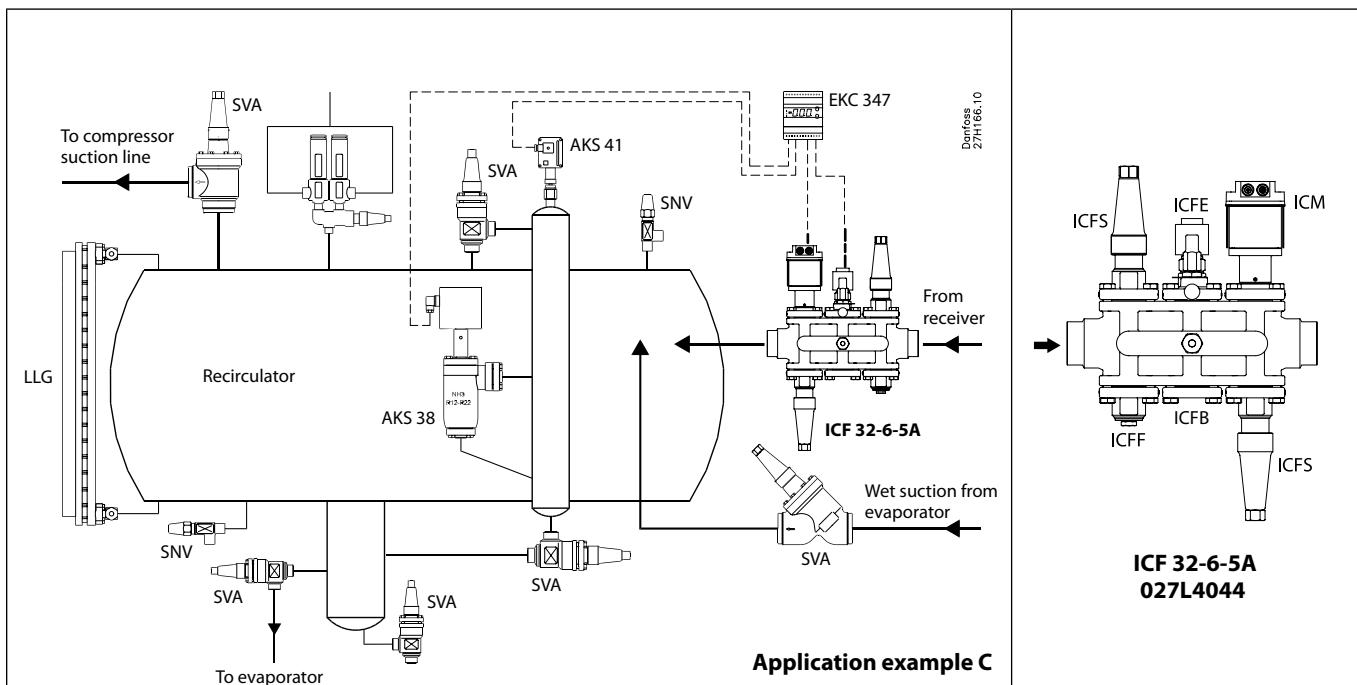

The hot gas line size is 1" and the preferred connection is socket weld. No manual opening stem is needed, and side ports are needed to connect the hot gas pilot line to the gas-powered valve. For this application, ICF20-4-9 (code number 027L3071) was chosen. For a larger capacity, ICF 25-4-9 would have been chosen.

**Application example B**

Application Example C

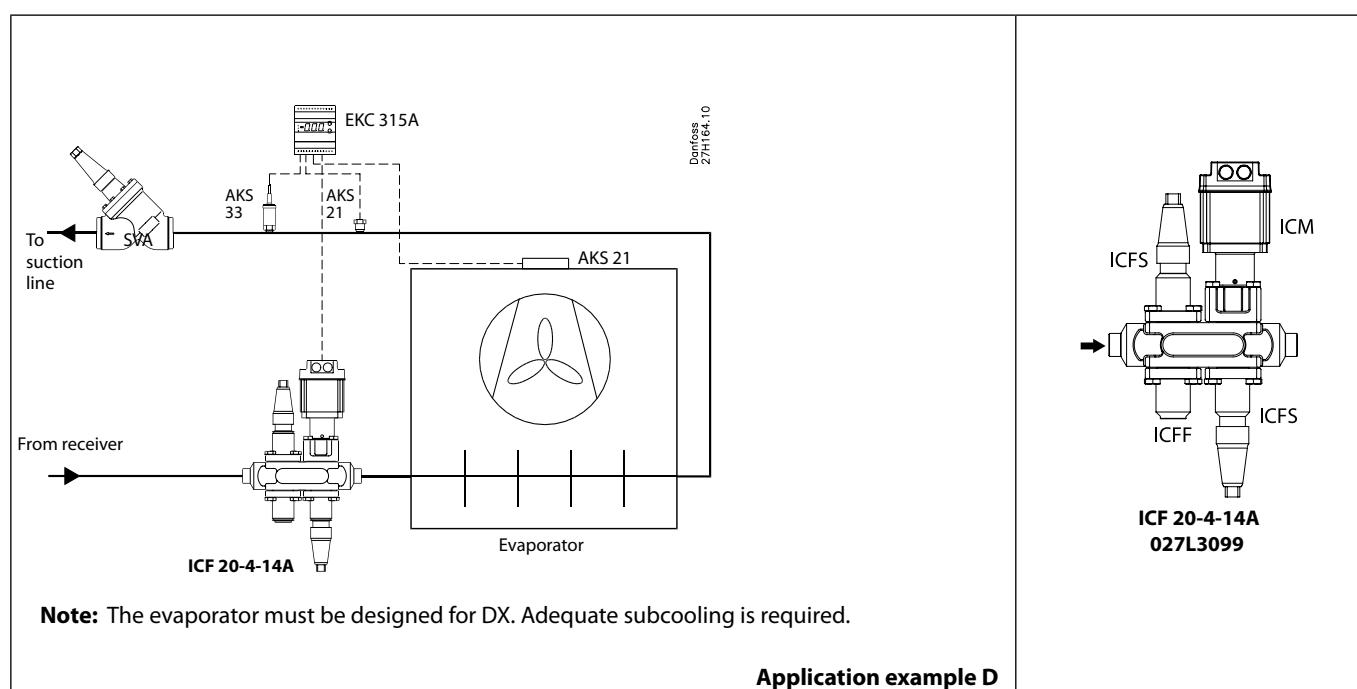

A valve station using a motorized valve is required for liquid makeup to a recirculator. A solenoid valve in front of the motorized valve and side ports for sight glasses are requested. The

pipe size is 1 1/4" and the preferred connection is socket weld. For this application, ICF 32-6-5A was chosen.

**Application Example D**

A valve station is required for a direct expansion evaporator using an electronic expansion valve and electric defrost. It is not required to have a solenoid valve in front of the motorized valve. Pipe dimension is 3/4 in, and the preferred connection is socket weld. There are requirements for side connections for a sight glass, drain, and pressure gauges.

For this application, the capacity was assumed to be small, and ICF 20-4-14A (code number 027L3099) was chosen. For larger capacities, a larger cone size or a larger ICF (25-40)-4-14 would have been chosen.

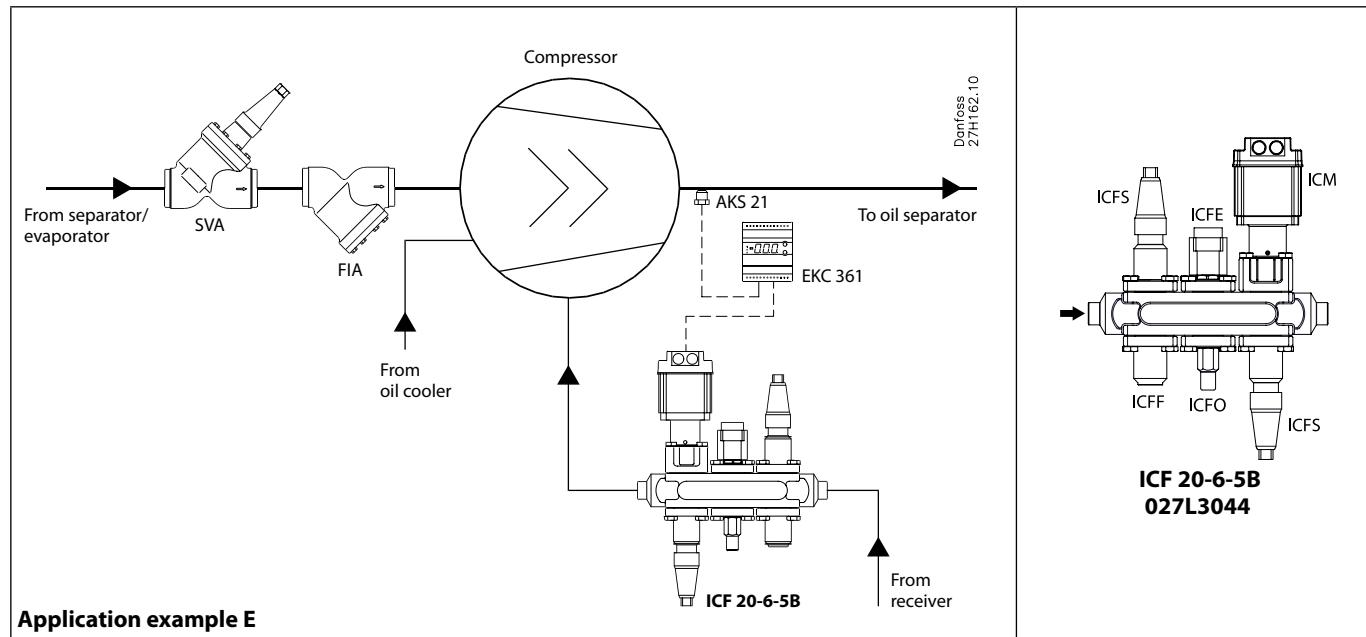

Application Example E

A valve station is required for compressor liquid injection using a motorized valve. A solenoid valve is required in front of the motorized valve. Pipe dimension is 1", and socket weld connections are preferred.

There is no requirement for a sight glass or for

side drain or pressure gauge connections.

For this application, choose ICF 20-6-5B (code number 0273044). For larger capacities, a larger cone size or a larger ICF (25-40)-6-5 would be the right choice.

Ordering ICF 20 with six function modules

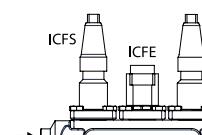

ICF 20-6

Nomenclature: **ICF** **20 - 6 - 4**
Type _____
Housing size _____

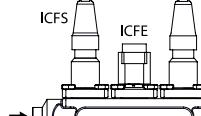

Housing size _____ Number of module ports

Standard configurations are shown below.
For special order configurations, see pages 24-27.

Application 1: ICF 20-6-1

Pumped liquid lines in flooded systems without hot gas defrost.	
<p>The modules are:</p> <ul style="list-style-type: none"> • ICFS stop valve module (M1) • ICFF filter module (M2) • ICFE solenoid valve module (M3) • ICFO manual opening module (M4) for the solenoid valve • ICFR manual regulating valve module (M5) • ICFS stop valve module (M6) 	

Application 2: ICF 20-6-2

<p>Pumped liquid lines in flooded systems with hot gas defrost.</p> <p>The modules are:</p> <ul style="list-style-type: none"> • ICFS stop valve module (M1) • ICFF filter module (M2) • ICFE solenoid valve module (M3) • ICFO manual opening module (M4) for the solenoid valve • ICFR manual regulating valve module (M5) • ICFN stop/check valve module (M6) 	
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------

Application 4: ICF 20-6-4

Application 5: ICE 20-6-5A, B or C

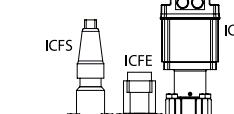

For liquid makeup to separators, direct expansion, or liquid injection to compressor.

This valve station uses a modulating motorized valve module. A, B, or C represents the cone size of the motorized valve.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICOFO manual opening module (M4) for solenoid valve
- ICM 20-A/20B/20C motor valve module (M5)
- ICFS stop valve module (M6)

Motor for ICM must be ordered separately.

Code numbers for ordering are given in the following table.

Each code number represents a completely assembled valve station with all components as shown above except for coils and ICAD motor where applicable.

Type	Connection	Side Ports Number and size*	ICF Part Number	ICF 20 description
ICF 20-6-1	3/4 in. SOC	none	027L3125	ICF 20-6-1: Stop valve, strainer, solenoid valve with manual stem, HEV, stop valve modules.

* ICF configurations ICF 20-4-12 and ICF 20-4-14A, B or C ordered with 4 side ports are shipped with removable sight glasses in locations P2/P5 and removable plugs in locations P3/P6 (see page 8 for an explanation of side port locations).

** ICAD motor-actuator (P/N 027H1200) for ICM module and coils for solenoid valve modules are not included, and must be ordered separately. Refer to the section "Ordering accessories."

Configuration examples - ICF with four function modules

Nomenclature: ICF 25 - 4 - 9

ICF (25-40)-4

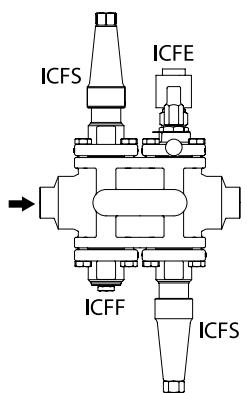

Standard configurations are shown below.
For special order configurations, see pages 24-27.

Application 9: ICF (25-40)-4-9

A hot gas or liquid line solenoid valve station.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICFE solenoid valve module (M3)
- ICFS stop valve module (M4)

Application 14: ICF (25-40)-4-14A or B.

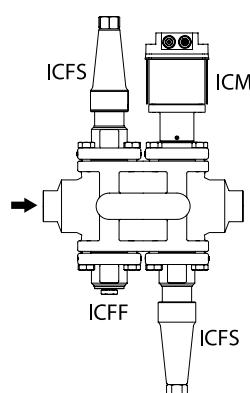

Motorized valve station without solenoid. 'A' cones can be used for liquid makeup, direct expansion, or liquid injection to compressor. The 'B' cone can only be used for pressure regulation or on/off solenoid function. A battery backup or UPS must be connected to the motorized valve for it to close during power failure.

The modules are:

- ICFS stop valve module (M1)
- ICFF filter module (M2)
- ICM 25 A or B motor valve module (M3)
- ICFS stop valve module (M4)

(same as application 5, but without solenoid valve)

Motor-actuator for ICM module must be purchased separately.

Code numbers for ordering are given in the following table.

Each code number represents a completely assembled valve station with all components as shown above except for coils and ICAD motor where applicable.

* ICF configuration ICF (25-40)-6-5A or B ordered with 6 side ports are shipped with removable sight glasses in locations P4/P9 and removable plugs in locations P2/P7 and P5/P10. All other configurations with 6 side ports will be shipped with removable plugs in locations P2/P7, P4/P9, and P5/P10 (see page 8 for an explanation of side port locations).

** ICAD motor-actuator (P/N 027H1200) for ICM module and coils for solenoid valve modules are not included, and must be ordered separately.
Refer to the section "Ordering accessories."

*** For butt-weld connections, contact Danfoss.

Ordering ICF 20 with four function modules

Nomenclature: ICF 32 - 4-11**ICF (25-40)-4**

In the drawings and ordering table below, standard configurations are shown in bold type.
Special order configurations appear in regular type.

ICF (25-40)-4-8	ICF (25-40)-4-9	ICF (25-40)-4-10	ICF (25-40)-4-11	ICF (25-40)-4-14
Fig. 19, application 8 SPECIAL ORDER	Fig. 20, application 9 STANDARD	Fig. 21, application 10 SPECIAL ORDER	Fig. 22, application 11 SPECIAL ORDER	Fig. 23, application 14 STANDARD

Code numbers

The code numbers refer to one complete assembled control solution.

Standard configurations are indicated by bold type. Special order configurations are indicated by regular type.

Emission : EN61000-6-3
Immunity: EN61000-6-2

Function (actuator)

The ICAD design is based on digital stepper motor technology that provides a high degree of flexibility with a single type of ICAD actuator.

The ICAD continuously displays the degree of opening (0-100 %).

The advanced menu system allows adjustment of several parameters to obtain a required function. Many different parameters can be configured, including:

Modulating and on-off control

Analog input

0- 20 mA or 4-20 mA

0-10 V or 2-10 V

Analog output

0- 20 mA or 4-20 mA

Automatic or manual control

Change of ICM valve speed

Automatic calibration

Multiple Fail Safe set-up options during power failure

For service, all input and output signals can be recalled and observed from the ICAD display.

Password protection has been linked to the entering the correct ICM valve module identification in order to avoid unintentional and non-authorized operation.

The ICAD can manage and display various alarms. If an alarm has been detected the display will alternate between showing the actual alarm present and the valve opening percentage. If more than one alarm is active at the same time the alarm with the highest priority will take precedence and will be shown on the display. All alarms automatically reset when no longer displayed.

Previous alarms can be recalled for traceability and service purposes.

Any active alarm will activate the common digital alarm output.

ICAD provides two digital output signals to 3rd party control equipment (for example, PLCs), indicating if the ICM valve is completely open or completely closed.

The hermetic magnetic motor coupling makes it easy to dismount the ICAD from ICM valve module.

ICAD-UPS for ICM

ICAD-UPS is designed for use with ICM-20 motorized valve modules installed with ICAD 600 actuators.

In the event of power failure, there is a need to make sure that the ICM goes to a safe position.

An ICM module with ICAD connected to ICAD-UPS will offer the choice of one of the following possibilities in the event of power failure:

- close ICM
- open ICM
- stay in its position at the time of power failure
- go to a specific ICM opening percentage

When mains power has been restored, the system will automatically return to normal operating mode as previously programmed.

Facts and features

Industrial product.

Can support up to 8 ICAD 600 motor-actuators

An integrated solution - battery and UPS.

Industrial approvals:

CE, UL, GL (Germanisher Lloyd).

DIN rail mounting.

LED indication

- Green (Power ON)
- Yellow (Flashing: charging; Constant: buffer mode, failsafe supply to ICAD)
- Red (battery fully discharged or faulty)

24 Vdc supply: The same transformer as for ICAD can be used. Only +0.5 A extra load on the transformer.

Battery check every 60 sec.

Adjustable buffer time*. (1, 2, 3, 5, 10, 15, 20, 30 or infinity) ensures longer battery lifetime.

Forced remote shutdown in buffer mode by digital input.

3 digital voltage-free relay contacts for signals to PLC systems. (power OK; buffer mode (failsafe supply to ICAD); and alarm).

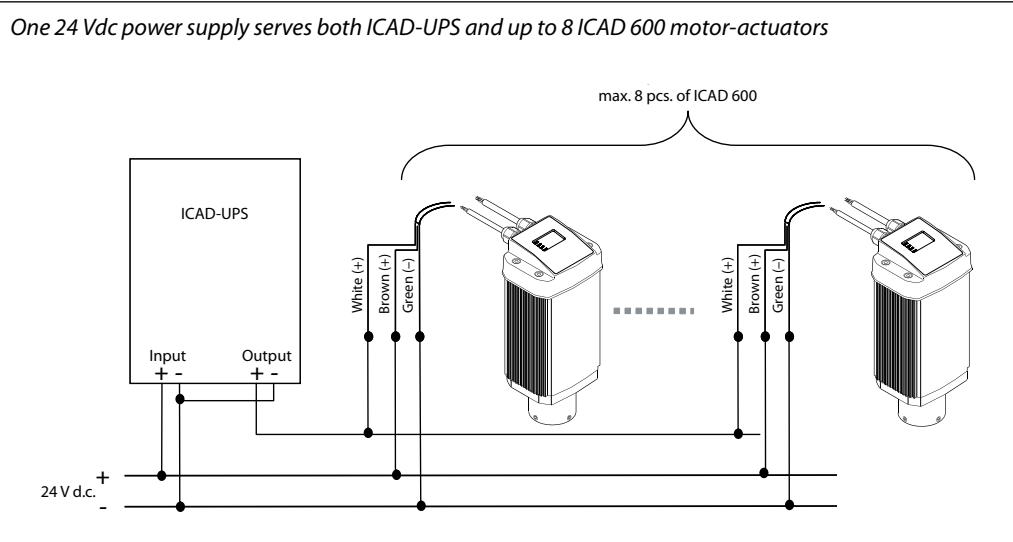

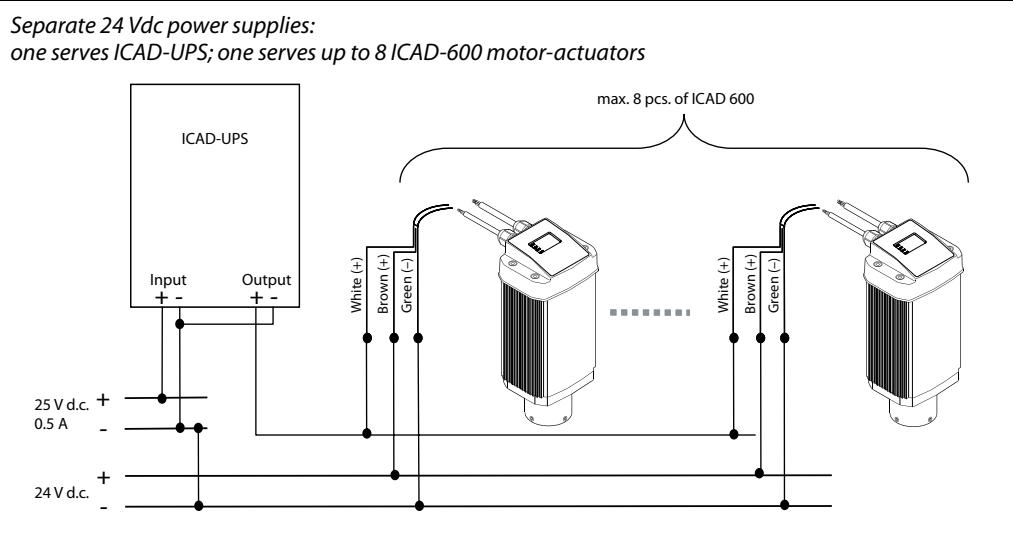

* Buffer time is defined as the period during which where ICAD is powered solely by the ICAD-UPS (not by mains power).

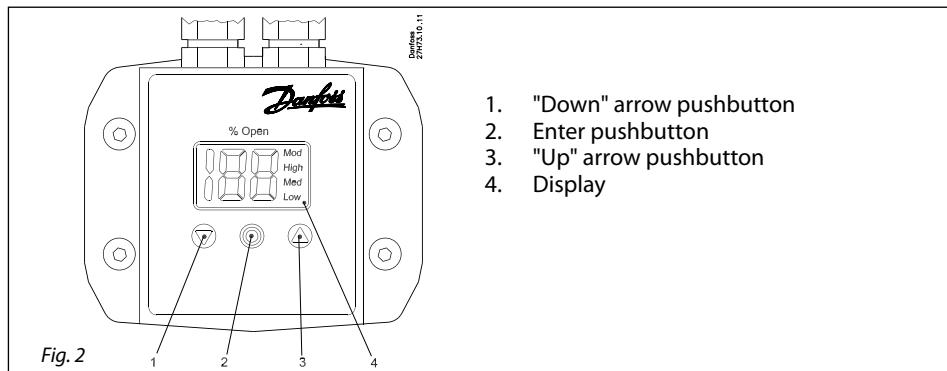

On ICAD-UPS there is an adjustable buffer time setting (1, 2, 3, 5, 10, 15, 20, 30 minutes, or infinity). If set to 3 minutes, the ICAD-UPS will switch off power to the connected ICAD 600 3 minutes after the power failure occurs, ensuring that the ICAD-UPS internal battery does not fully discharge.

Code number: **027H0182**

For further information please see the ICAD-UPS instructions (PIHV0B).

ICAD-UPS applications

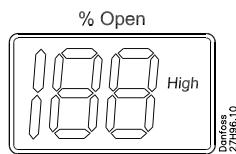

General operation

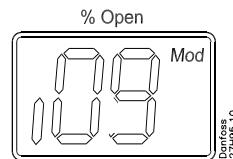

From the ICAD-600 display, it is possible to monitor operation of the ICM motor-actuator and to change parameter settings to adapt the ICAD and ICM to the actual refrigeration application.

The display (fig. 2)

- Normally shows open percentage (OD), (0-100%) of the ICM valve. If no pushbuttons are depressed for 20 seconds, the display will return to this mode.
- Gives access to change a value once the parameter list has been accessed.
- Displays the function status by means of text (in the figure above, "Mod" is displayed; and the figure below shows an indication of "High"). These are the meanings indicated:
 - **Mod** means that the ICAD is positioning the ICM valve according to an analog input signal (current or voltage).
 - **Low** means that the ICAD is operating the ICM valve as an on-off solenoid valve at low speed according to a digital input signal.
 - **Med** means that the ICAD is operating the ICM valve as an on-off solenoid valve at medium speed according to a digital input signal.
 - **High** means that the ICAD is operating the ICM valve as an on-off solenoid valve at high speed according to a digital input signal.

*Navigating with the display*

To gain access to the parameter list, press the ENTER pushbutton continuously for 2 seconds. The display will change to show one of the parameters, as in the figure below:

The figure displays parameter i09, digital input function. A complete parameter list, with the range and meaning of each, is found on the following two pages.

The UP and DOWN arrow buttons can be used to scroll through the parameters.

Changing a parameter

Select the parameter you wish to change by scrolling through the parameter list with the UP and DOWN arrow pushbuttons. When the parameter you wish to change is displayed, briefly press the ENTER pushbutton. Now use the arrow buttons to change the value of the parameter up or down as you desire. When the value you want is displayed, press the ENTER button briefly to save the setting.

You may now select another parameter to be changed, or return to the operating mode as explained below.

Returning to operating mode

When you are finished reading or changing parameters, press the ENTER button for 2 seconds to return to the operating mode.

Alarms

ICAD can handle and display several alarms.

Description	ICM alarm text	Comments
No valve type selected	A1	At start-up A1 and CA will be displayed
Controller fault	A2	Internal fault inside electronics
Analog input error	A3	Not active if i01 = 2 or i02 = 2 When i03 = 1 and AI > 22 mA When i03 = 2 and AI > 22 mA or AI < 2 mA When i03 = 3 and AI > 12 V When i03 = 4 and AI > 12 V or AI < 1 V
Low voltage of fail safe supply	A4	If 5 V d.c. < Fail safe supply < 18 V d.c.
Check Supply to ICAD	A5	If supply voltage < 18 V d.c.

If an alarm condition exists, the ICAD display (fig. 2) will alternate between showing the alarm text and the current opening percentage.

If more than one alarm is active at the same time the alarm with the highest priority will be displayed. **A1** has the highest priority, **A5** the lowest.

Any alarm will close the normally open contacts of the common digital alarm output.

Alarms will automatically reset when the causative condition no longer exists.

Alarm history can be found in parameter **i11**.

Parameter list

Parameter name	Parameter number	Minimum	Maximum	Factory setting	Unit	Comments
ICM OD (valve open percentage)	-	0	100	-	%	ICM valve open percentage is displayed during normal operation. Running display value (see i01, i05).
Main switch	i01	1	2	1	-	Internal main switch 1: Normal operation 2: Manual operation. Display flashing. The OD (valve open percentage) can be manually adjusted with the arrow buttons over a range from 0-100%.
Mode	i02	1	2	1	-	Operating mode 1: Modulating: The ICM modulates in response to an analog input (see i03) 2: ON-OFF: the ICM is operated as an on-off solenoid valve and controlled by a digital input. See also i09 .
Analog Input signal	i03	1	4	2	-	The type of analog input signal from the external controller 1: 0 - 20 mA 2: 4 - 20 mA 3: 0 - 10 V 4: 2 - 10 V
Speed in ON-OFF and in modulating mode	i04	1	100	100	%	Not active when i01 = 2 The rate of change in valve opening can be set. If i02 = 2 the display will indicate the speed with which the valve open percentage is changed.. Low , Med and High also means ON-OFF operation. If i04 less than or equal to 33, Low is displayed If i04 is from 34 to 66, Med is displayed If i04 > = 67 High is displayed
Automatic calibration	i05	0	1	0	-	Only active when valve type has been configured by setting i26 . Always resets automatically to 0. Display will flash " CA " during calibration, if ENTER push button has been pressed for two seconds.
Analog output signal	i06	0	2	2	-	Type of analog output signal to be used for ICM valve positioning. 0: No signal 1: 0 - 20 mA 2: 4 - 20 mA
Fail safe	i07	1	4	1	-	Determines valve position in fail-safe mode after power fails. 1: Close ICM valve 2: Open ICM valve 3: Maintain ICM valve position 4: Go to open percentage configured by i12
Digital Input function	i09	1	2	1		Define function when DI is ON (short circuited DI terminals) when i02 = 2 1: Open ICM valve (DI = OFF => Close ICM valve) 2: Close ICM valve (DI = OFF => Open ICM valve)
Password	i10	0	199	0	-	Enter number to access password protected parameters: i26 Password = 11
Old Alarms	i11	A1	A99	-	-	Old alarms are listed, most recent first. The alarm list can be reset by simultaneously pressing the up and down arrow pushbuttons for 2 seconds.
OD on power fail	i12	0	100	50	-	Only active if i07 = 4 Determines fail safe OD (with fail-safe power supply) when main power fails.
ICM configuration	i26	0	6	0		NB: Password protected. Password = 11 At first start up A1 will flash in display. Enter valve type 0: No valve selected. Alarm A1 will become active. 1: ICM20 with ICAD 600 2: ICM25 with ICAD 600 (not used with ICF 20) 3: ICM32 with ICAD 600 (not used with ICF 20) 4: ICM40 with ICAD 900 (not used with ICF 20) 5: ICM50 with ICAD 900 (not used with ICF 20) 6: ICM65 with ICAD 900 (not used with ICF 20)

Parameter list (continued)**Service**

Description	Display name	Min.	Max.	Factory setting	Unit	Comments
OD %	i50	0	100	-	%	ICM valve opening degree
AI [mA]	i51	0	20	-	mA	Analog input signal
AI [V]	i52	0	10	-	V	Analog input signal
AO [mA]	i53	0	20	-	mA	Analog output signal
DI	i54	0	1	-	-	Digital input signal
DO Close	i55	0	1	-	-	Digital output closed status. ON when ICM valve open < 3 %
DO Open	i56	0	1	-	-	Digital output open status. ON when ICM valve open > 97 %
DO Alarm	i57	0	1	-	-	Digital output alarm status. ON when an alarm is detected
MAS mP SW ver.	i58	0	100	-	-	Software version for MASTER Microprocessor
SLA mP SW ver.	i59	0	100	-	-	Software version for SLAVE Microprocessor

To reset to factory settings :

1. Remove power supply.
2. Activate down arrow and up arrow pushbuttons at the same time and hold.
3. Connect the power supply.
4. Release down arrow and up arrow push buttons.
5. When the ICAD display (fig. 2) is alternating between showing: **CA** and **A1**, reset to factory settings is complete.
